

CIE Automotive reinforces its commitment to the climate emergency and recognises the importance of halving global emissions by 2030 at a global level and achieving net zero emissions by 2050.

CIE Automotive is committed to meeting the science-based 1.5°C and net zero emissions targets.

Roadmap:

- We secure the short term with the current KPIs till 2025.
- Project Supply Chain Race to Zero
- SBTi alignment
- Midterm: 1.5°C
- Climate neutrality by 2050

Supply Chain Race to Zero

To meet its commitment to achieve net zero greenhouse gas emissions by 2050, the company seeks to understand how suppliers are addressing the challenge of decarbonisation, so that it can **support and monitor** those that are struggling to deploy actions to reduce their emissions.

In addition, the aim is to establish a timeframe in which the supply chain can offer **decarbonised technical solutions** for CIE Automotive's goal of net zero emissions and enable the company to anticipate any technical barriers that may arise.

CIE Automotive thus aims to **involve suppliers in the goal of decarbonisation by 2050**. Efforts to raise awareness of the challenge that society faces due to climate change must be extended to the entire supply chain (scope 3).
